

Creating an Anime Presentation with AniPoint

AniPoint is the world's number one anime PowerPoint creation suite! This document will guide you through the process of creating a presentation for anime club meetings. The process is divided into five distinct parts: Meeting Information, Ballot Information, AniList Settings, Exporting, and Finishing Touches. You can find some examples of the PowerPoint in the appendix at the end of the document.

Step 1: Enter Meeting Information

The first step in creating your presentation is entering the information about your meeting. All of the meeting information can be entered at the top left of the UI.

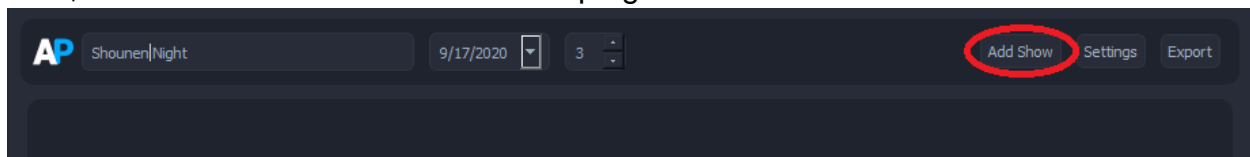

From left to right, enter the title of the meeting (e.g. Shounen Night), the date of the meeting, and the meeting number (e.g. if it is the 3rd meeting of the semester, enter 3). This information will be used in the title slide of the PowerPoint. Content in these boxes automatically saves when you stop typing.

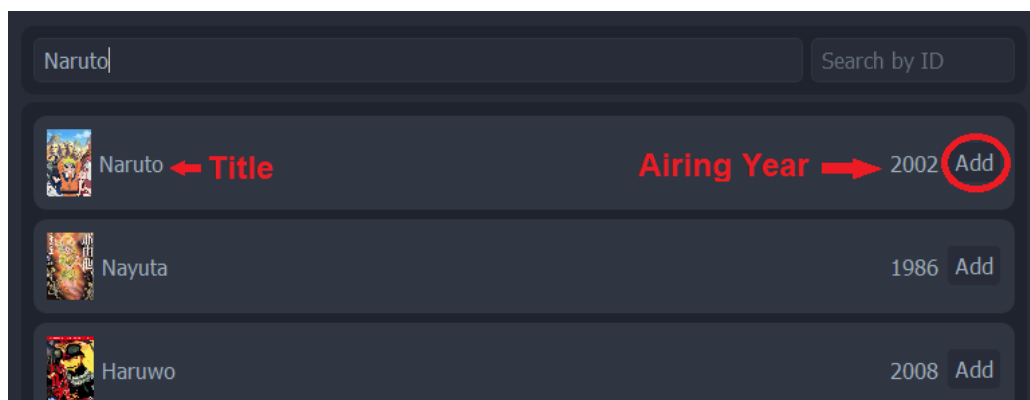

Step 2: Enter Ballot Information

Now that your meeting information is complete, you can begin adding shows to your ballot.

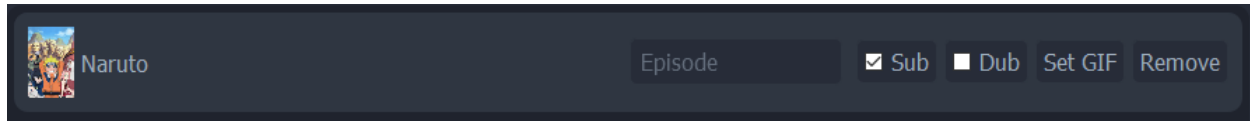

First, click the *Add Show* button in the top right.

This will open a popup window with two search boxes: title and ID. If you know the show's AniList ID, you can enter that in the second box. Otherwise, enter its title in the first box, press the enter key, then select the show from the results list below and click the *Add* button next to it.

This will create a new entry in the ballot section of the UI. Here you can set some specific information about the show, such as the episode you will be showing and whether you have the subbed or dubbed version of the episode (or both), as well as add a GIF or image from the show to the slide. You can also remove the entry if you added the wrong show.

Once you have set the show's information, repeat Step 2 for each show on your ballot.

Warnings:

As you add shows, you may notice that some of them have a warning icon next to the episode box (⚠️). This indicates that there may be an issue with the show you selected. Hover over the warning icon to see a list of warnings for that show. The possible warnings and their causes and resolutions are listed in the table below.

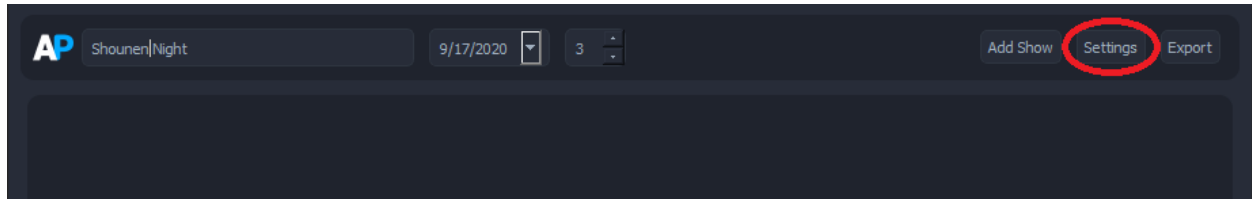

Warning	Cause	Resolution
Director not found	No director is listed on AniList	Manually enter the director on the PowerPoint slide or leave it as Unknown
Studio not found	No studio is listed on AniList	Manually enter the studio on the PowerPoint slide or leave it as Unknown
Prequel listed, please verify season	The show has a prequel listed on AniList	Some shows have their seasons split into multiple entries on AniList. Ensure that you have selected the correct season of the show. If you have, ignore this warning.
Episodes are not standard length	The show has an episode length less than 20 minutes or more than 30 minutes	Check the episode length on AniList. If the show is short, you may want to show multiple episodes (be sure to update the episode settings on AniPoint). If it is long, be sure to budget enough time during your meeting.
Description is short	The description on AniList is less than 200 characters.	Check the description and decide if you want to manually add to it or write your own.

These warnings primarily exist to make you aware of any potential issues and will not cause any issues when generating the PowerPoint. Most of the warnings can be resolved in Step 5, after exporting the PowerPoint.

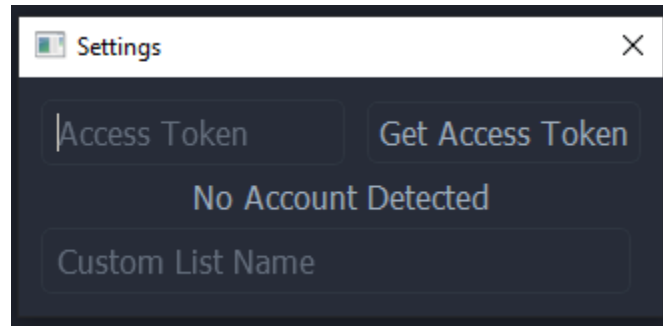

Step 3: Enter AniList Settings (Optional)

If you would like to have AniPoint automatically add the ballot to your AniList, follow the steps below. Otherwise, skip to Step 4.

In the top right, click the *Settings* button.

This will open a popup window prompting you for an access token and a custom list name.

Click the *Get Access Token* button and you will be taken to a webpage where you can log in to your AniList account. Enter the login information for the account you want AniPoint to update, click the box that says, "I'm not a robot", and then click *Login*.

On the next page, click *Authorize* to generate your access token. This token will allow AniPoint to update your AniList. Copy the code from that page into the access token box in AniPoint and press the enter key. You should see the text "No Account Detected" change to "Logged in as" followed by your AniList username. If it instead says, "Invalid Access Token", ensure that you have copied and pasted the entire access token correctly.

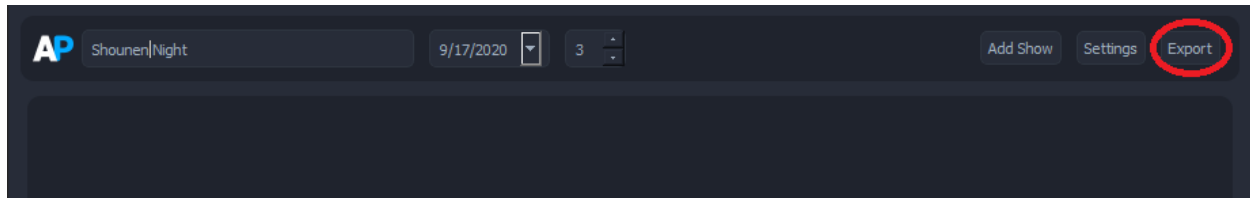

If you want the ballot to be saved in a custom list on AniList, enter a name for that list in the *Custom List Name* box, otherwise, leave it blank to just add the shows to your list.

Once you have done this, close the settings window and return to the main window of AniPoint.

Step 4: Export Your Presentation

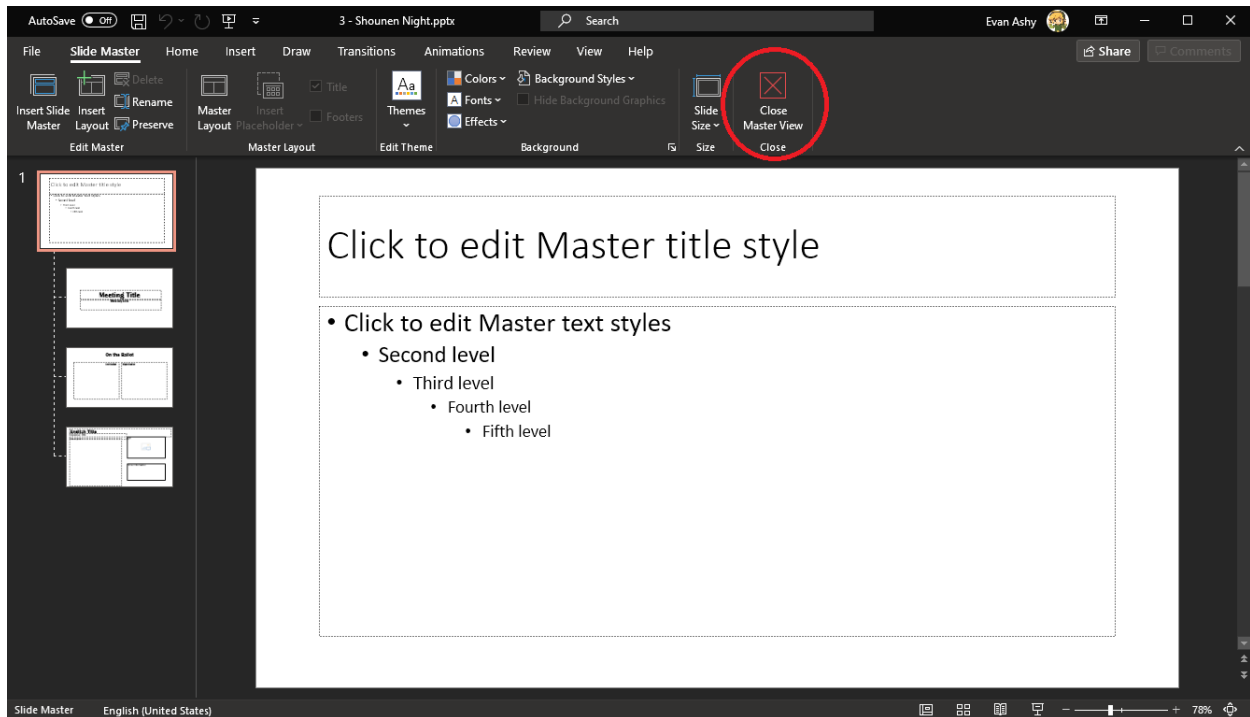

Once you have finished creating your ballot and updating your settings, it's time to export the PowerPoint.

Simply click the *Export* button in the top right and select a save location for the file. The filename will default to “Meeting Number – Meeting Title”, but you can rename it if you want. Finally, click *Save* to finish the process.

Step 5: Apply Finishing Touches

You should now have a fully functional presentation. Navigate to the save location you selected in Step 4 and open the file you created. If it says: “Click to edit Master title style”, click the *Close Master View* button at the top of the screen.

If there were any warnings in Step 3 that you needed to resolve manually, do that now. Also, check each slide for any formatting issues that may have occurred or for anything you want to manually adjust.

If you want to add a custom background to your PowerPoint, right-click an empty space on the slide and select *Format Background*. Then select Picture or texture fill on the right. Then click *Insert*, then *From a File*, and navigate to the file you want to use for the background. Finally, apply any effects you want on the image and click *Apply to All* to set the background for the entire presentation.

Show Slide

Ghost in the Shell: Stand Alone Complex 攻殻機動隊 STAND ALONE COMPLEX In the not so distant future, mankind has advanced to a state where complete body transplants from flesh to machine is possible. This allows for great increases in both physical and cybernetic prowess and blurring the lines between the two worlds. However, criminals can also make full use of such technology, leading to new and sometimes, very dangerous crimes. In response to such innovative new methods, the Japanese Government has established Section 9, an independently operating police unit which deals with such highly sensitive crimes.
